

Native Solution - Android

Our primary focus to provide an easy solution of android native utilities. In the current version, three utilities are added.

1. Open location service control package
2. Save Image into a gallery without any delay
3. Show toast on screen

Integration -

1. Import Native Solution package.
2. If your project already contains Android Manifest.xml in the plugin/Android folder location, go to step 5.
3. If your project does not contain Android Manifest.xml in plugin/Android folder location, goto step 4 and 5.
4. Copy Android Manifest.xml from temp/StagingArea/ and paste into plugin/Android.
5. Copy text below the line -

<activity

android:name="com.codemaster.android.LocationServiceControl"></activity>

Paste it into your Android Manifest.xml file in the application tag.

Note - temp/StagingArea/ folder is visible after creating APK. This is the very easy and perfect method to integrate multiple plugins in your game/app.
